The Mechanical Components Division of ELECTROPRECIZIA SA has a tradition of more than 55 years in the manufacturing of parts for the electric motors and automotive electric equipment.

We can manufacture, at our customers' requests, a wide range of mechanical parts for various applications.

The aluminum parts are manufactured on 25 die casting machines (with powers from 160 up to 1000 tf).

Our highly skilled staff, together with our machines and the best raw materials allow us to manufacture parts of highest quality.

ELECTROPRECIZIA obtained the Certificate for the Management of the Quality system according to ISO 9001 standard from the German company TÜV Management Service GmbH.

We are manufacturing parts using our own technical documentation or with the documentation received from our customers.

In our plastic moulding shop we can manufacture a wide range of complex parts on 53 machines (including ENGEL CNC machines).

We have more than 80 machines for pressing, stamping and bending with powers between 2 1000 tf (type AIDA, IWK, ESSA, SCHULLER, BLISS, ZDASS, AUGUSTINO COLOMBO).

In our shops we have 300 machines (automated lathes, semiautomatic lathes, grinding machines) for machining (more than half the inventory of this type of machines of ELECTROPRECIZIA SA) which can make a wide range of complex and diversified parts.

We are also able to do heat treatment and thermo-chemical treatments if it is required. Our division has also a shop for galvanic coatings.
